## Natural Hot Springs Pool

**Where does the water come from?** The hot water is collected across the parking lot from the Poolside Grille and is piped underground to the pool. It comes out of the ground at approximately 118 degrees.

**How many gallons of water?** The two pools together hold approximately 100,000 gallons of water. There are no chemicals added to the pools, the water flows naturally and freely in one side and out the other; water is fully replenished every 6 to 8 hours. After the hot water flows from the pool, it is used to heat several buildings and to water our Greenhouse and Garden.

### Mineral content: per study in 1902

Solid contents in 100 parts

Calcium Carbonate	8.65
Magnesium Carbonate	2.69
Sodium Carbonate	2.74
Sodium Sulfate	4.87
Potassium Chloride	.83
Sodium Chloride	.58
Silica	3.17
<b>Total</b>	<b>23.53</b>

**Temperature:** Large pool averages 96 degrees Fahrenheit and the small pool averages 103 degrees.
